What are polytropes?

Solutions to...

The Lane-Emden Equation

$$\frac{1}{\xi^2} \frac{d}{d\xi} \left(\xi^2 \frac{d\theta}{d\xi} \right) = -\theta^n(\xi) \tag{1}$$

A dimensionless, 2nd order nonlinear differential equation relating the pressure of a spherically-symmetric gas distribution to the radius.

Definitions

Definition

Polytropic process - Thermodynamic process that obeys the relation

$$Pv^n = C$$

Definition

Polytropic index - Constant that relates pressure of a polytropic fluid to its volume (density). It may be any real number.

Polytropes

Methods

$$\frac{d^2\theta}{d\xi^2} + \frac{2}{\xi} \frac{d\theta}{d\xi} = -\theta^n(\xi)$$

$$\phi = rac{d heta}{d\xi}$$
 $rac{d\phi}{d\xi} = -rac{2}{\xi}\phi - heta^n$
